Cryptography Questions

1. What are the advantages of a self-signed certificate?

```
They are free, have a little more control over the creation/management
Also they are flexible if you need a quick temporary secure connection that
is required
```

2. What are the disadvantages of a self-signed certificate?

```
They are not trustworthy
```

3. What is a wildcard certificate?

```
A wild card certificate is used to secure a domain and its subdomain with a
single certificate
```

4. When binding a certificate to your website, Azure only provides TLS versions 1.0, 1.1, and 1.2. Explain why SSL 3.0 isn't provided.

```
SSL3.0 has multiple security vulnerabilities thats why its not provided
```
